

FRAILITY (RED) WARD ROUND DUTIES

1. Find bleep (8820) and carry bleep for the day
 - For ward jobs, do not need to go to MET calls
2. Find CoTE consultant for day; unlike the other ward rounds, you do not need to print lists as the CoTE consultant does this themselves
3. Do ward round with CoTE consultant in RED area
 - Write your bleep (8820) in all ward entries so nurses can contact you if the patients you have seen become unwell
 - Any frailty patients in GREEN area should be seen by the CDU junior for the day; you should only see RED patients and stick to RED areas
4. Do jobs generated on WR, including TTOs (on midway) as required
 - After the WR, the CoTE will usually run through the jobs with you +/- update the list
5. Update list at end of day
 - The CoTE consultants will usually catch up with you to do this together
 - If you need to find the list, it is located: Team Drive > Medicine Junior Doctors > Care of the Elderly > Frailty Unit – AMU > select appropriate date
 - Columns are self-explanatory
6. For anyone staying overnight, put out blood forms for the phlebs the next day
 - Use bamboo to print blood forms (find patient on panda, click small down arrow next to “ICE” box, click order tests/exams, click “accept location”, click on the tests you want, click “continue with request...”, fill in details, click “accept request” [at very bottom left of screen], make sure the request prints
 - Place paper request form in the slots for each bay (the nurses can show you where these are, they vary bay by bay)
7. Handover (via phone call) any patients that move to other wards to those wards
8. Handover patients to Acute Medical Unit FY2+ who will monitor patients once ward rounds and jobs are completed. Handover bleep to AMU FY2+
9. Link with GREEN ED Consultant once ward round and jobs completed.
