

# Hospital @ Home: Discharging patients on Oxygen Pathway (SARS-CoV2)

## What will H@H do?

- Inpatient assessment prior to discharge and request home oxygen delivery to patient's home
- Clinical assessment with the patient at home, set up the equipment, and ensure the patient understands the service
- Daily contact and additional home visits as required by H@H
- Patient remains under BSUH respiratory consultant (Drs Congleton/Hippolyte) with weekly virtual ward rounds to discuss progress and determine ongoing need for oxygen and address any clinical concerns

**Not sure if patient meets criterion? Ring 65201 or email Dr Congleton/Hippolyte for advice and review**
