

1

## Is it **SAFE** for transfer?

- Decision should be based on a repeat ABCDE assessment in the last **5 minutes**
- If intubated is there adequate sedation +/- paralysis?
- Are appropriate airway management skills present?

2

## Get the transfer equipment:

- Green transfer bag, working suction, drugs, portable monitoring
- Set alarm limits
- Ventilator check
- Is there adequate battery life on all electronic equipment?

3

## Oxygen:

- Is there enough for the transfer?
- Once on the oxygen cylinder, replace the flow meter to the wall

4

## Plan your route:

- Clarify understanding between team members
- Does someone need to go ahead to clear corridors/hold lifts?

5

## Is the destination ready to receive?

- Contact ITU 15 minutes beforehand
- For X-ray then contact radiographer: RSCH 64242
- For CT then contact radiographer: RSCH bleep 8800, PRH 6157
- Ensure IV cannula is secured and flushed ready for contrast
