Head injury

Information for parents, carers & relatives

About head injuries

Most head injuries are not serious and simply result in a bump or bruise. Minor bumps and bruises to the head without any “red flag” symptoms (see below) or change in your child’s normal behaviour can usually be managed at home with the following advice:

- Observe your child closely for the next 2-3 days. Check that they respond to you normally
- Give your child pain medicines such as paracetamol or ibuprofen if they are in pain. Always follow the manufacturers’ instructions for the correct dose
- Make sure your child is drinking enough fluid
- Allow your child plenty of rest and avoid stressful environments until they are feeling better

Red flag symptoms

These symptoms are if your child:

- is sleepy and you cannot wake them
- has had three or more separate vomiting episodes
- has a bad headache or is persistently irritable, even after pain medicine
- has difficulty speaking or understanding what you are saying
- has weakness in their arms or legs or loss of balance
- has a convulsion or fit

If any of these symptoms occur, phone 999 for an ambulance or go straight to the nearest A&E department

Post head injury symptoms

After a head injury your child may experience some symptoms including:

- mild headache, especially while watching TV or on a computer or mobile phone
- tiredness or trouble getting to sleep
- irritability or bad temper
- concentration problems
- feeling sick and/or dizzy

These symptoms are not uncommon and should settle over the next few weeks. If you are worried about any of the symptoms your child is experiencing, or if they are not going away, arrange for your child to see their GP.

Things that will help your child’s recovery if they are experiencing symptoms after a head injury include:

- Avoiding TV, computers, and mobile phones for at least 24 hours after the injury
- Avoiding rough play until they are feeling better
- No contact sports (e.g. football or rugby) until they are feeling completely back to normal and usually not within 3 weeks

Please tell your child’s teachers if they still have any symptoms when they go back to school.

For further information about concussion and returning to normal activities after a head injury please use the QR link opposite.
