

# Research on Trevor Mann

BABY UNIT

**Brighton & Sussex University Hospitals NHS Trust is committed to participating in clinical research**

The Trevor Mann Baby Unit participates in a variety of large national and international research programmes and smaller local studies. Research is a part of the everyday work of the NHS. All babies cared for by the NHS benefit from past research currently in practice.

## **Does my baby have to take part?**

By taking part, you will be helping to identify effective ways of caring for babies and be part of developing neonatal care.

Whether you take part or not the highest standards of care remain in place for your baby.

## **How are studies regulated?**

All research has regulations that protect the health and safety of the babies taking part. All studies have to be examined by an Ethics Committee. This committee protects the rights and interest of babies in every trial. Clinical research is governed by the NHS Research Governance Framework and the Medicines and Health Care products Regulatory Agency).
